

# W8BLV Brandmeister DMR Repeater

On July 19, 2022 we started using the Brandmeister DMR System.

## Talkgroup setup for Time Slots 1 and 2:

### Time Slot 2

- **Ohio State talkgroup 3139** - On all the time
- **Local 2 cluster** - On all the time - this is connected full time to the other repeaters in SW Ohio, and the SW Ohio Local 31394 talkgroup
- **Local 9** – On all the time - only keys up our local W8BLV repeater

No other talkgroups should be used on time slot 2. Your radios should be able to use the above three talkgroups on time slot 2 without reprogramming.

### Time Slot 1

- All other talkgroups must use time slot 1 and are push to talk (PTT) activated, otherwise, it's quiet.

**Below are the suggested talkgroups for you to program into your radio on time slot 1:**

- **Ohio TAC 31390** talkgroup
- **USA Bridge 3100** talkgroup
- **TAC 310** talkgroup
- **TAC 311** talkgroup
- **TAC 312** talkgroup

- **TAC 313** talkgroup
- **World Wide 91** Brandmeister talkgroup
- **North America 93** Brandmeister talkgroup
- **Echo/Parrot 9990** Brandmeister test - configure as a private call or it won't work
- **AMSAT 98006** Brandmeister talkgroup
- **NETS 31001** Brandmeister scheduled nets talkgroup
- **NETS 31002** Brandmeister scheduled nets talkgroup

There are many others that you can program in and use.

To listen in on the above time slot 1 talkgroups, you must select it in your radio and press the PTT button. It will then stay connected for 15 minutes after the last time it is keyed up on our repeater. Be courteous and listen in on the time slot before using it, to be sure someone else hasn't been using a talkgroup.

Note: The AMSAT net is Wednesdays at 10 pm; a timer will turn it on about 9:30. We may add other nets if there is a need.
